Brerton. 1613.

A new Almanacke and Prognostication, made

for the yeare of our Lord God. 1613.

Being the first from the Bissextile or Leape-yeere.

Calculated and composed according to Art, for the latitude and meridian of the honorable Citie of London, and may very well serue all the south parts of great Britaine.

By Thomas Brerton, Teacher of Arithmeticke, Geometrie, and Astronomie, neere Holborne-conduit in London.

Printed at London for the company of Stationers.

A note of the moueable feasts according to our accompt.		The reformed or accompt beyond the seas.

Since the action at Cadiz	17
Since the last great plague at London	10
Since his Maiesties coronation in Scotland 29 of July	46
Since his happy comming to London the 7. of May	10

A note

A note of the Termes and their returnes.

Hillary Tearme, beginneth the 23 of January, and endeth the 12 of February.	4 hath 4, returnes.	1. Octabis Hillary, Jan. 20 2. Quind Hillary, Jan 27 3. Craft purifi. Febuar. 3 4. Octabis purifi. Feb. 9
Easter Tearme, beginneth the 21 of Aprill, and endeth the 6. day of May.	5 hath 5, returnes.	1 Quind pasch, Aprill 19 2. Tres pasch. Aprill 25 3. Mens pasch. May 2 4. Quinq; pasch. May 9 5. Craft assent. May 14
Trinitie Tearme, beginneth the 4 of June, and endeth the 23 of June.	4 hath 4. returnes.	1. Craft. Trinit. May. 31. 2. Octab. Trint. June. 7. 3. Quind Trinit. June 14 4. Tres Trinit. June. 21.
Michaelmas-Terme beginneth the 9. day of October, and endeth the 29, day of November.	8 hath 8. returnes.	1. Octab. Mich. Octob 6. 2. Quind Mich. Octo. 13 3. Tres Mich. Octob. 20 4. Mens Mich. Octob. 27 5. Craft Anim, Nouem. 3 6. Craft Marti. Nouē, 12 7. Octab Mart. nouem. 18 8. Quind Mar. nouem. 25

The vacation betwixt Tearme and Tearme.

Hillarie and Easter.	is	9. weekes and 5. daies.
Easter and Trinitie.		2. weekes and 4. daies.
Trinitie & Michaelmas		15. weekes and 3. daies.
Michaelmas & Hillarie.		7. weekes and 6. daies.

The Moones gouernment ouer our bodie, as she passeth vnder the 12.

Aries The head and face

Taurus
Necke & throate

Canter
Brest, stomacke & lungs.

Virgo
Guts & belly.

Scorpio
secrets & blander.

Capricor
the knees.

Gemini
Armes & shoulders

Leo
heart & backe.

Libra.
Reines & loines.

Sagitarius
thighes

Aquarius
the legs.

Pisces The Feete

The signification and vse of the Caracters placed in the fiue and sixe Columes of this Almanacke.

♄ Saturne. ♃ Iupiter. ♂ Mars. ☉ Sol. ♀ Venus. ☿ Mercurie, ☽ The moone.

♈ Aries. ♉ Taurus. ♊ Gemini. ♋ Cancer. ♌ Leo. ♍ Virgo. ♎ Libra. ♏ Scorpio. ♐ Sagitarius, ♑ Capricornus. ♒ Aquarius ♓ Pisces.

☊ Dragons-head. ☋ Dragons-taile. ☌ Coniunction or change. ⚹ Sextile, □ quartile or quarter. △ Trine. ☍ Opposition or full.

So that desiring to know how the Moone or any other Planet is consigured or affected, at this or that time, doe but seeke the day of the month, and right ouer against the same, in the colume of aspects you haue your desire, noting alwaies that the letter a adioined sign fieth the fore-noon, and p the after-noon. Example, finding this Caracter □ placed before ☉ and ☽ on the 3. of Ianuarie I conclude that the last quarter of the moon is at 2. a clocke and 18. minutes in the after-noone that day: the change on the 10. day at 9. a clocke 57. minutes: first quarter the 18. and so of all others.

Bretnor. 1613.

A Prognostication for this present yeere of our Lord God, 1613.

Being the first from the Bissextile or Leape-yeere.

Wherein, besides the generall state of the foure Quarters of the yeere, and dayly disposition thereof, are briefly set downe sundry Physicall notes, and other directions of good consequence.

Together with the time and effects of such Eclipses, as shall happen and appeare this present yeere, 1613.

Physically argued, and gathered from the severall habitudes and effects of this our earthly Orbe, to that of light and others, and of all of them one to another.

By *Thomas Bretnor*, Teacher of the Mathematicks, and Practitioner in Physicke, neere Holborne Conduit in London.

Printed at London for the Company of Stationers.

Certaine Phisicall directions, and first of strengthning the powers of the body.

IT is very requisite and necessary, that the Physician, whose counsell and advice is required touching the disease of any sicke patient (especially of accompt) should know the naturall constellation, or radix, of such a persons nativity, that by conferring the same with the time of his decubitus, or first aggresse of the disease, he may be fully resolved both of the nature and issue thereof: or at least, be so cunning a Physiognomist, that by the outward face and feature of his body, he may be able to know what Planets are friendly or fatall unto him: for as ♈ and ♂ (accompted most vile) are seldome ominous to diers of their owne bleeding, though the one through despaire, the other through despite, sometimes become murtherers of their own selves, whereas ♃ his lust, and ♀ her lasciviousness, the ☽ her lunacy, and ☿ his lewdness, are often causers of their owne decay. And surely, that Physician (as Scotus saith) which is ignorant of Astrology, may give a medicine at one time that will kill, which ♐ at another time would cure: in regard whereof, let no wise man be so carefull of his life, as to commit the same to the blind practise of illiterate Mountebankes & cunning Quacksalvers, who (not by rationall Arts, but a few Empericall medicines) boldly undertake the cure of all maladies whatsoever.

And although I go not about in this place or any other, to set downe any instructions for the learned, yet I thinke it not amisse, to give the ignorant a taste of their weakness, by placing before their eyes some such things, as are most necessary to be considered & knowne of every one, that shall undertake the cure of any Patient whatsoever.

First therefore, it is requisite to be knowne, that the principall vertues in our bodies, which are Vitall, Naturall, and Animall, and the vertues subseruing them, to wit, Attractiue, Retentiue, Digestiue, and Expulsiue, are best holpen, strengthened and comforted, as followeth.

The Vitall Vertue or liuely power, whose seat is in the heart, is gouerned and cherished by ☉ his influence, and therefore to strengthen the same, we commonly vse things temperately hot and dry, or hot and moyst, and at such time as the Sunne is strong and constituted with the friendly beames of ♃ and ☽.

The Naturall Vertue (gouerned by ♃ with participation of ♀ and ☽) is seated in the Liuer, wherein are ingendred the 4. humors, and is comforted especially by ♃. if we vse hot and moyst things, and that when he is well disposed in the horoscope, or configured with ♀ and ☽ fortunate.

The Animall Vertue (distinguished into the intellectuall part, which ☿ gouernes, △ the sensitiue, which the ☽ with ♃ & ♀ do rule) is best comforted vnder those Planets well disposed, and with medicines temperate and agreeable to their natures.

The Vertue Attractiue (one of the 4. lesse principall and subseruing) toyeth in heat and drinesse, by the influence of ☉ and ♂, who are hot and dry, but rather of ☉, who is temperately hot and dry, then of ♂, whose intemperate heate and drought doth rather attaine a corruptiue quality then otherwise. And this Attractiue vertue is best fortified by things hot and dry, the ☽ passing vnder the fiery signes, ♈, ♌ & ♐: yet ♌ of some Astrologers, through his excessiue heate and feruour, is holden inconuenient in this case. If therefore the ☽ in ♈ or ♐ be well aspected of ☉ or ♂ (so that ♂ be occidentall, and in a signe tempering his offensiue quality) the Attractiue vertue is best comforted: but if we cannot haue the ☽ in eyther of the sayd signes, it will suffice, if she apply vnto one of the sayd Planets with a friendly aspect, so that ♌ or ♐ be ascending.

The vertue Retentiue delighteth in coldnes & drought, by the influence of ♄, and is best comforted, the ☽ seated vnder the earthly signes ♉, ♍ and ♑, and when she applies with a friendly aspect vnto ♄: But if the ☽ be not in any of the sayd signes, it will suffice to haue any of them aſcen-

ascending.

The vertue Digestiue is furthered in heate and moysture, by the influence of ♃, and is best strengthned, when the ☽ wandreth vnder the aeriall signes ♈, ♎ and ♒, especially if at such a time she be conioyned with that friendly Planet: but if she cannot be found in any of the sayd signes, it is conuenient to elect a time when one of the sayd signes shalbe ascending.

The vertue Expulsiue delighteth in coldnes and moysture, and that by the influxe of the ☽ well affected, & placed vnder the watry Trigon ♋, ♏ and ♓, or while one of those signes are in the Horizon.

Certayne Astrologicall elections for Purging.

BEcause superfluous humours, noysome and hurtfull to natures temperament, do often happen to humane bodyes, which through their malignant and virulent quality, doe not onely induce dangerous sicknesses, but euen death it selfe, it is therefore the part of a good Phisition, to depell those humours from the body, and to reduce the same to an agreeable temperature, the which by no meanes can be more safely effected, then by electing of conuenient seasons for the same, and that is chiefely by obseruing the effects of the ☽, who albeit she do not excell the other planets in power and effects, yet because she is seited nerest to the Earth, we receiue from her more the iuely influence of all the superior Planets and starres.

First therefore, administer no purgatiue medicine in extreeme hot or cold weather, or at the rising, or setting of any violent starre, vnlesse the rigour of the ayre be qualified by some artificiall meanes, and so continued vntill the body be conformed.

Secondly, obserue, that medicines are better giuen in the wane or decrease of the ☽, then in her spring and increase, for that superfluities are commonly then ripest, and aptest for euacuation.

Thirdly, let the ☽ by no meanes be ioyned vnto the ☐, ☍ or ☌ of ☉ ♄, or ♂, or vnto any combust or retrograde Planet, or corporally conioyned vnto ♃ or ♀. For si quis, ☽

cum ♃ existente, laxationum acceperit, Medicinæ opus & effectus minuetur: so friendly is he to nature, that he doth corroborate and fortifie her against the force of the medicine.

Fourthly, it is requisite, that the Planet governing the superfluous humour, be weake & cadent, and not configured with the ☽, or better disposed then shee: for otherwise, that humour will remayne in the body, hardly to be expelled by force of any ordinary medicine. If therefore you intend to euacuate choller and purge the reines, whereof ♂ is portitent, ☿ or ☽ ought to be fortified, and ♂ depressed. If melancholy and the spleene, fortifie ♄, & depresse ♑ author thereof. So likewise for flegme, vse the influxe of ☉ and ♂, and anoyde that of ☿ and ☽. And lastly, to cleanse the blood, and purge the liuer, elect ☿ and ☽, and reiect ♃ predominant ouer the same.

Fiftly, in giuing of any medicine, the signe ascending, and that wherein the ☽ is, are to be obserued: For if such agree not with the naturall working of the medicine, that time is to be deferred, vntill a conuenient signe ascend. And chiefly beware of the ruminating signes ♈, ♉, ♑, & ♌, which are commonly causes of enomition, and so that the ☽ and Lord ascendent be vnder the earth, and not aboue by any meanes, vnlesse you purposely giue a vomitiue medicine, such as are made of Mercuriall or Antimoniall stuffe: for then those ruminating signes, and the ☽ & Lord ascendents position aboue the Earth, and application to a retrograde Planet, are very auayleable and behouefull, which otherwise would infallibly cause a Naufra, and so hinder the effectuall working of the medicine.

Lastly, if the geniture can be had, it is very materiall to auoyd the ascension of any such signe, as was malevolently placed in the radix.

Prepare humours, the ☽ in ♎, ♏ or ♐.

Take { Gagarismes, / Glisters, } { the ☽ come in ♋ or ♈. / ♈ ☌ or ☐ ♃, in a good aspect of ♃ or ☿, and applying to a Planet aboue the earth.

Vse sneesing the ☽ in ♋ ♌ or ♑ well affected, and applying to a retrograde Planet and aboue the Earth.

Both for { hot / cold } { diseases / the ☽ in } { ♋ ♌ ♐ ☍ ♀ and in a ☌ or ✶ of ♃. ☿ / ♈ ♌ ♐ ☍ ♀ in a ☌ or ✶ of ☉ or ♂ / cleanlinesse, ☽ in ♎ or ♐ and in a ☌ or ✶ of ♄.

Astro-

Aſtrologicall elections in Phlebotomy.

EVen as in exhibiting of purgative medicines, ſo likewiſe in phlebotomy certayne generall rules are to be obſerued, and that with ſo much greater care, by how much, blood is the more excellent and noble humor.

Firſt therefore, let an eſpeciall regard be had of the age, ſtrength and cuſtome of the ſicke patient: For from very yong, weake or old perſons, or from very leane or groſſe people, blood in no caſe is to be taken, but onely from ſuch as are too plethorickely oppreſſed with ranke and foule blood, and haue diſtented veynes.

Secondly, the time of the yeere is greatly to be reſpected: for in the Canicular dayes, or any other extreame hot weather, as alſo at the riſing or ſetting of any violent Starre, phlebotomy muſt needs be forborne (except in extreame Feuers, pluriſies, the Calenture, Tabarditis, and ſuch like) becauſe the humours are ſo perturbed, that the good blood rather iſſueth forth, then that which is naughty & euill: likewiſe in very cold weather the humors are ſo compacted, that if a veine be then opened, both good and bad bleatherth forth alike.

Generally, let blood in the Spring time from the right ſide, and in Autumne from the left, the Moone placed vnder ♈, ♎, firſt halfe or ♒.

But more particularly let blood

The { Flegmaticke, Cholericke, Melancholicke, Sanguine, } the ☽ in { ♈ or ♌. ♐ or ♓ ♒ or ♎ firſt halfe, any of them.

Which conſtellations haue their hoped effects, if in the roote of the patients nativity, neyther ♄ nor ♂ poſſeſſed or beheld any ſuch ſigne with a ſinifter aſpect.

And for yeares, let blood

Younger, Middle-aged Ancient, Decrepit, } from the { Change, to the firſt quarter. First quarter, to the full. Full, to the laſt quarter. Laſt quarter, to the Change.

The most laudable aspects for this purpose, are the ☌ of ☽ with ♃ and ♀, and her △ or ✶ with them, or with ☉ or ☿ incombust: also the ☽, △ or ✶ with ♂, and her □ and ☍ with ♃ and ♀ are indifferent.

But in any case let not ☽ at such time be neere the ☌, □ or ☍ of ☉, ♄ or ♂, or any combust Planet, or any of them with like configuration with other.

In like maner it is very dangerous to open any veine, or make incision in any member, wherein the ☽ at that present hath any dominion: for howsoever there be some boldfaced Mountbanckes & insinuating Quacksalvers, that will presume to worke wonders, without regard of age, sexe, season, or constellation, yet I would have such men know, that as the body of Man and every living creature is humected or moystned, according to the ☽ her increase, decrease, and position, but more especially, that member which is subiect to the signe wherein she is: so by opening or tampring therewith, great hurt to the sicke person may redound, chiefly, if at any such time the ☽ be afflicted by the congresse or malignant aspect of any fatall Planet, and the rather, if such Planet in the Radix of the nativity had any dominion in the 6. 8. or 12. house: for then I dare be bold to say, that in such a case, the sicke patient is thereby neuer or very hardly deliuered from his languishing disease.

Lastly, the signe ascending is diligently to be obserued, lest the Lord thereof or ☽ be at that instant in the 6. or 8. house, or haue any aspect to the Lords thereof, or to any malevolent Planet: if possible, let the infortunes be then cadent and fortunes angular.

Above all, let not thy Phisicion be a Saturnist, or Martialist, vnlesse thy selfe be of the same temper.

Make Scarification in like signes and aspects, as in Phlebotomy, saving that this is effected with better successe, ☽ increasing.

Looke that the ☽ be not vacua cursu, when eyther Phlebotomy is vsed, or pharmacall potion administred.

Certayne husbandly aduertisements.

Although the painefull Husbandmã, (as best acquainted with the nature of the soyle, the situation and rich-

richnesse thereof, the temperature of the ayre, and the incredible difference of some grounds from others neere adioyning,) may, by his practise & long experience, know when and how to manure, sow, and plant the same, as well as eyther Varro, Virgill, or Pliny himselfe: yet because they are for the most part ignorant, or consider not that the Moone in these rurall practises, hath great power and operation: I thinke it not amisse to advertise them, that if they will sow moyst seedes, or commit any seede into moyst ground, it is best done in the wane of the ☽, and neere the change: but if they will sow hote seedes, or any other in hot ground, it is better effected in the increase, and neere vnto the Full.

Generally, in sowing of seeds, let the ☽ be swift in course, and applying vnto ♄, direct and incombust, with a △ or ✶ aspect, and if it be possible, let ♃ or ♀ behold ♄ at the same time with a friendly regard, or at the least wise, let the planet to whom the Moone applyeth, be aboue the earth, and the signe ascending moueable or common, and the Lord thereof, together with the ☽, in moueable or cõmon signes, as ♈, ♋, ♎, ♑, ♒, or ♓, ♀ free from the ☌, □ or ☍ of ♂ or ♄, or any combust or retrograde Planet. Commit seedes to the ground, in no wise on the day of any Eclipse, or vpon the full Moone: for such seldoome or neuer come to good, but are subiect to blasting and putrifaction.

But in Planting, or Grafting of Trees, let the ascendent be fixed, and the Lord thereof in the same, or in the 10. and orientall, or render his power vnto a Planet fortunate in one of them.

Let the ☽ also be in ♈, ♌, or ♐ increasing, or at least in ♍ or ♓, ♀ in a good aspect of ♄, and ♄ with ♃ or ♀, as before, and some of them in watry signes, and strong in the 1. 11. 5. or 2. houses: but in any case let not ♂ be strong, or in the ascendent, or behold the same.

Dresse or prune your Vines at the full Moone, and when thee is vnder ♉, ♌, ♍ or ♑, and sathall neyther field Mise, or Byrdes, infest the Grapes.

Sow Beanes, and Pease, about the full Moone, but Lentils and Fetches in the last quarter.

For more plenty of Hay, spread your Meddowes with compost in February or March, the ☽ increasing: but for more abundance of graine or seedes, let your fieldes be dunged in the wane of the Moone.

Geld,

Sell, or lay Cattel, from the laſt quarter, to the change, the ☽ placed vnder ♈, ♐, or ♌, & free from infortunes.

Sheare or clippe Sheepe, the ☽ increaſing: Reape corne and cut downe hay, preſently after Full Moone.

Fell timber for building in the laſt quarter of ☽, ſhe being vnder the Earth, and in a good aſpect of ♑. or rather vpon the very change day, and latter end of Winter: for Plinie ſayth, that Timber cut at ſuch a time, will become exceeding hard and durable. Others write, that the moſt conuenient time to fell the ſame, is betwixt the full and the laſt quarter, from S. Martins day, vntill mid January.

Plaſh Hedges, and lop Trees for Fewell, the ☽ increaſing, in ♈ or ♎, & aſpected of ♄ or ♀.

Cut Payze the better to grow, the ☽ increaſing, in ♉, ♍ or ♎ and in a △ or ✶ of ♄ or ♀ as before.

To deſtroy Payze, Weeds, Warts, or ſuch like excreſcenſes, cut them in the laſt quarter, and when ſhe is in ♂ □ or ☍ of ♑ or ♐.

Weane or take Children from Nurſe, towards the full ☽, when ſhe is voyd of courſe, and not ſeated in ♈ or ♎.

Hunt wild Beaſts ☽ in ♈, ♌ or ♐, and in a good aſpect of ♄ or ♂, and the aſcendent mountable.

Hawke for Fowle ☽ in ♊, ♍, ♐, or ♓, & in a good aſpect of ♃, ♀ or ☿ incombuſt.

Set Sayle, ☽ increaſing, & when ſhe is ſwift in courſe, & ſeperating by a △ or ✶ from ☉ ♃ ♀ or ☿ not retrograde or combuſt, & applieth vnto any of the with like illumination.

Likewiſe the aſcendent, a watry ſigne, and the Lord thereof in the 3. or 9. houſe, fortunate or in a good aſpect, with the Lords of either of them, or either of the fortunes, or ☿ in the 1. 3. or 9. houſe well affected (the infortunes cadent) do note a proſperous and ſpeedy voyage.

But in no wiſe let the ☽ or Lord aſcendent be ioyned with the ſtormy conſtellations of Orion, Arcturus, Canis Maior, or Minor, the hediæ or Hircus, or ♂, or conſtigured with any retrograde or vnfortunate Planet, or the ☽ or any infortune in the 1. 7. or 4. houſes, or ♂ or ♄ angular.

A perfect and eaſie way to find the time of full Sea in moſt places of this Kingdome, and Countreys adioyning.

IN the Kalender is ſet downe the houre and minute of Full ſea at London bridge for euery day in the yere, according to the Moone her motion, which although it

it may be ſomething hindred or furthered by winds and land floods, as the one is ſtated and the other falleth: yet as theſe are ſeldome extreame, ſo do they not often cauſe any great difference in time. If therefore you deſire to know the time of full Sea in any place hereunder noted, looke for the day of the moneth, & oueragainſt the ſame rightwards (ioyning to the forraigne accompt) you ſhall find the houre and minute of full Sea at London bridge: and for any other place, do but adde or ſubſtract ſo many houres and minutes, to or from the time there ſet downe, as the Table following ſheweth, & the totall of the one, or remaynder of the other ſhalbe the time required.

Example.

Willing to know the time of full Sea at London bridge the 26. of January, I enter the Kalender, and ouer againſt that day, and vnder the title, I find it high water there at 3. a clocke: then deſiring likewiſe to know the time of full Sea the ſame day at Lin, Humber, Weymouth, &c. I adde 3. houres, as the Table ſheweth, and it maketh 6. a clocke, which is the time of high water in all thoſe places. And for Grauesend, Downes, Tenet, &c. ſubſtracting one houre, and a halfe. I find it full ſea there halfe an houre paſt one: and ſo of all the reſt.

For explanation of this Table, consider that it consisteth of 5. columnes or spaces, the first whereof contayneth the names of the Cities. The second, the Rhombe or point of the com-

compaſſe they beare, or are ſcituated frō London. The 3. the diſtance of each of them from the ſayd City. The fourth, the time of Sunriſing before it doth at London, marked with the letter A, or the time after, noted with the letter P. The fift and laſt ſheweth the quantity of the longeſt day in euery of the ſayd places. If therefore you would know the Rhombe, diſtance, &c. betwixt the City of London and Ieruſalem, or betwixt any of the ſayd Cityes and the ſame, there nēdeth no further labour; but directly vnder the title, & ouer againſt the place required, you may find your deſire in ſuch eaſie maner, that further direction were nēdleſſe.

Of the Eclipſes happening this yeere 1613.

FOure times this yēre will part of this Vniuerſe be depriued for a ſmall time, of the Sunne his beautious beames, and twiſe will the Selenean Inhabitants ſuffer the ſame accident. The Tartarians, Aſians, Africans, and Americans will behold and fēle the force of thoſe foure of the Sunne and firſt of the Moone: ſo that wee in England ſhall onely ſee part of the firſt or latter Eclipſe

eclipse of the Moone, which will happen vpon the 18. of October, at 3. a clocke and 13. minutes, in the afternoone: for at that very instant will our Grandame Ops eclipse and hide the bright beames of sole-shining Sol, frō the view of the Lunar Inhabitants. She will begin to stand in the Moones light, at one a clocke and 11. minutes in the afternoone, and by degrées totally darken her at 2. a clocke & 18. minutes, so that shee will continue in cimerian obscurity, vntill 4. a clock and 8. minutes, at which time she wilagaine by little & little recouer her wonted Moone-light or Sun shine: for at 5. a clocke and 15. minutes, wil she be altogether freed from the Earths interposition and darke shadow. The whole durance of this Eclipse, will be 4. houres, 4. minutes, and the Eclipticke digits 19. $\frac{1}{3}$ We at London, and generally all our nation, shal see but a small quantity of this Eclipse: for it will be 4. a clocke & 50. minutes, before the Moone rise: so that she will not be full halfe an houre high, before the finall end of her obscurity; and so much the better: for we in England (no doubt) shall feele the effects thereof, so much the lesse, but the Polonians, Sweathes, Russians, Tartarians, and Turkes, (to whom especially these lunar Eclipses are ominous, and fatall) are like to sustaine great losses and

hinde-

hinderance, through diſſention amongſt themſelues, and death of their cattell.

Of the foure Quarters of the Yeere, and firſt of Winter.

VVInter (which ſenſibly and indéed commenceth with Nouember) is commonly ſaid to begin, whē this nothly part of our mother earth is furtheſt deflected from the Suns-all-heating rayes, which fell out this laſt yere vpō the 11. day of December, at 8. a clocke and 40. minutes in the morning: for then was this part of our Orbe, and the Sunne, at greateſt diſtance one from another, and ſo cauſed ſhorteſt dayes, and longeſt nights to all Northerly Inhabitants.

This Brumall Quarter is likely to proue very variable, & vnconſtant in weatherage, as by the dayly diſpoſition thereof hereafter may plainely appeare.

Many diſeaſes of Saturnine and Mercuriall nature, are like to haunt people this ſeaſon, ſuch as are Quartane, Diuturnall and Quotidian Feuers, Coughs, Conſumptions, Chollicke, Gout, Dropſies, Obſcurity of ỹ Liuer & Splane, Falling Sickneſs, Lethargies, Swimming or Giddines in ỹ head, Conuulſiōs

and

and such like.

Of the Spring.

THe Spring, (which truely may be sayd to begin with Febzuary) accozding to Astronomers, doth commence this yere vpõ the 10 day of March, at 9. a clock, and 8. minutes in the fozenoone, the 21. of Gemini ascending: foz then hath the Earth (entring the first minute of Libra) volued her selfe to a right angle with the Sunne, and so consequently causeth equall dayes and nights to all nations.

The beginning of this quarter is like to pzoue too vntemperately cold and moyst, the middle, windy and blustring, the latter, variable.

Many diseases like those of winter, and sundzy of hot and cholericke nature, are like to infect people this Spzing, such as are Tertian continuall burning feuers, Head-ach, Iandise, Disenteryes, Plurisies & Nephziticall diseases, and all such as come of vnnaturall heat, as Inflamations, Spitting of blod, Erisipelas, small Pocks, Measels, and such like. The Eclipse also happening last yere, may put vs in feare of an earth-quake, and some ensuing plague to this City, which God foz his mercyes sake diuert from vs.

Touch-

Touching the reuolution in generall, ☽ in the 10. and in a ☐ of ♄, at the oppoſition preuentionall, ☿ in the aſcendent, at the reuolutiō and change poſtuentionall, doth not threaten onely theſe things before mentioned, but alſo ſtirres vp much contention and iarres among men, iangling and controuerſies about religion, ſtrange diſſimulation, falſehood and truce-breach in the world, many vnfaithful ſeruants, and abortion to women with child.

Of Summer.

SUmmer (which in Naturall reaſon begins in May) according to vulgar reckoning, makes his entry at ſuch a time as the Earth (touching the firſt ſcruple of ♑) hath finiſhed his ſoutherne peregrination, and ſo comming neereſt the Suns viuall preſence, obtayneth greateſt portion of day light, or when the Sun ſtepping into the firſt minute of ♋, hath ended his Northerly inclination, which whether way taken, commeth to paſſe this yeere vpon the 11. of June, at one a clocke and 24. minutes in the afternoone, the 14. degree of ♎ aſcending.

This Quarter is like to proue hot and ſoultry for the moſt part, yet many hayle-ſtormes, ſudden flaſhes & thunder-claps will now and then be ſtirring, and ſo will Tertian and peſtilent Feuers, Pluriſies, Soundings, Paſſions at the heart, Paynes in the head and backe, Tumors and Inflamations, afflict many this Summer.

Of Autumne.

AUtumne (which in common ſence begins with Auguſt) is alwayes ſayd to enter at ſuch a period of time, as the princely Planet Sol, (returning from-ward vs) recouereth the Equinoctiall in the firſt minute of ♎, or rather when the earth (entring the firſt point of ♈, and beholding the Sunne face to face) recouereth a like portion of light & darkenes, which eyther way taken, falleth out this yeere vpon the 13. of September, at 4. a clocke and 56. minutes in the morning, the 19. of ♍ aſcending.

In this Quarter, we are like to haue great variety of weatherage, as ruffling winds, hayle-ſtormes & many dashing ſhowers, with pleaſant Sun-ſhine intermixed.

Sicknelles like to haunt the ſame, are Feuers of all ſorts,

Pluriſies, Flatulent & Splenetick diſeaſes, with Cramps, Stiches, Conuulſions, Cholicke, and Rhewmes.

A more particular prediction as well of the riſing and ſetting of the Planets and ayres dayly diſpoſition, as of the good and euill dayes in euery moneth.

January.

♄ is Southweſt at Sunſet, ☿ Weſt Southweſt at Sunriſing, ♂ appeareth Southeaſt at Sunſet, ♀ is our beautifull morning Starre, ☿ beginneth to appeare in the euening.

THe i. and ii. dayes, ſome ſtormy blaſts.

Laſt quarter, the iii. day, at ii. a cloche, xviii. minutes in the afternoone, and the iiii. and v. kindly winters weather, the vi. vii. and viii. dayes ſnow or ſleete.

LAst quarter, the i. day, halfe an houre before midnight, and the ii. and iii. dayes wetly disposed, the iiii. v. and vi. faire and clere, the vii. viii. and ix. windy & wandring.

New Moone the r. day. at ii. a cloche and xxii minutes in the morning, and the xi xii. & xiii. diſpoſed to moyſture, the xiiii. xv. and xvi. Sun ſhining.

Firſt quarter, the xvii. day, halfe an houre paſt viii. at night, and the xviii. and xix. inclyned to rayne, the xx. xxi. xxii. and xxiii. chilly and variable.

Full Moone the xxiiii day, halfe an houre before noone, windy ſpringing weather, for the moſt part, all this quarter.

Good dayes.	Euill dayes.
1. Something vnto ward.	2, 3. Much adoe, little ſport.
4, 5. In the way of preferment	6, Neyther full nor faſting.
7. The towne is ours.	8, 9. Nothing but blowes.
10, 11. Thorow the pikes.	12. 23. Riſe vp and fall.
13. make no bones at it. (wel.	14. A crabbed anſwere. (fleſh.
18, 19, 20. Hope well and haue	15. 16. 17. Neyther fiſh nor
25, 28. The world is mending	22. 24. At his wits end.
30. A witty chike.	27, 29. Head and a Serpent.

May.

☽ is Southeaſt at Sun-riſe, ♃ in the South at Sun-ſet, ☿ is South-weſt at the ſame time, ♀ is our morning Star, ♂ plaies bo-peepe.

Laſt quarter, the i. day, at i. a clocke, & 41. minutes in the afternoone, drizzling weather till the change.

New Moone the ii. day, iii. quarters paſt v. in the afternoone, and the x. xi. xii. and xiii. ſome rayne, if the wind lye, the xiiii. and xv. diſpoſed to thunder.

Firſt quarter the xvii day, halfe an houre paſt iii. in the morning, and the xviii. xix. and xx. dayes, ſome ſtormes now and then. the xxi. and xxii. more wet then wiſhed.

Full Moone the xxiii. day, viii. minutes before viii. in the euening, & the xxiiii. xv. & xxvi. hot and ſun-ſhining. the 27. ſomewhat bluſtering, the xxviii. xxix. and xxx. cleare dayes.

Laſt quarter the laſt day, at v. a clocke, and xxxii. minutes in the morning, windy and wauering.

Good dayes.	Euill dayes.
2. Be not ouerdamned.	1. 3. A backe reckoning.
8. Cup and Couer too.	4. Looke not to thriue.
11. A politicke pate.	5. 6. 7. The end is doubtfull.
13. All poſſible fauour.	9. 10. In an euill temper.
14. make hay while ſun ſhines	12. Stay, and ſtirre not.
15. 16. With ſome difficulty.	18. 19. Meddle on no hand.
17. It will come at laſt.	23. 24. As bitter as Gall.
19. 26. In the morning or not.	25. More haſte the good ſpeed.
21. Be not too briefe.	29. 30. 31. Time is paſt.
22. A kindly welcome.	
27. 28. Wit may win her.	

June.

☽ is

♄ is our day Starre, ♃ is Southweſt at Sunſet, ♂ is our euening Starre, ☿ and ☽ walke *in tenebris*.

Twel. xi. xii. and i. pleaſant dayes, the v. vi. and vii. not much vnlike.

New Moone the viii. day, at vi. a cloche, and 40. minutes in the morning (the i. of ♌ aſcending:) this is a Criticall day amongſt the Germanes: for they iudge the temperature of their harueſt according to the weatherage thereof, which ſet-dome fayleth: the ix. x. and xi. dayes thundering & ſtormy, the xii. and xiii. not much vnlike.

Firſt quarter the xv. day, at eyght a cloche, and 38. min. in the morning, and the xvi. and xvii. foultry hot, the xviii. xix. and xx. a hayle ſtorme now and then.

Full Moone the xxii. day, at v. in the morning, and the xxiii. and xxiiii. ſomewhat lofty, the xxv. a ſtorme, the xxvi. xxvii. and xxviii. ſome cooling dropps.

Laſt quarter the xxix. at x. a cloche, and 42. minutes at night, and the xxx. day wet by diſpoſed.

Good dayes.	Euill dayes.
1. 2. Pleaſant in the end.	3. Stay the Bettes.
7. Eaſily obtayned.	4. A blow on the blind ſide.
9. 10. No tayling, if followed.	5. 6. Long harueſt, little corne.
12. 13. All poſſible pleaſure.	8. Neither good egge nor bird.
14. 16. By wit & warineſſe.	11. As falſe as Iudas.
17. 18. It falls into thy mouth.	15. Full of melancholy.
20. 23. In a doubtfull caſe.	21. 22. Inueterate malice.
25. Preuent him in time.	24. Not for thy turne.
26. 27. 30. Diligence does it.	28. 29. Pernicious plotting.

Iuly.

♄ is playne South when Sol peeres, ♃ is Southweſt after he ſets, ♂ is our euening ſtarre, ☌ coucheth with Sol, ☿ awhile is our day Starre.

The i day pleaſant weather, the ſecond day is accounted of the Germanes Criticall: for if it rayne that day there, it commonly rayneth a moneth after. And ſo is the xv. day in England: but how certayne theſe fall out, I leaue to others obſeruation. The iii iiii v and vi. windy & wauering.

New Moone the vii. day, at v a cloche, xxii. minutes in the afternoone, and viii. and ix. moyſtly diſpoſed, the x xi. and xii thunder now and then.

Firſt quarter the xiii. day. xxvi minutes paſt one in the afternoone, and the xv xvi xvii and xviii lofty winds, the xix and xx pleaſant dayes.

Full Moone the xxi day, at three a cloche, and 42. min. in the afternoone and the xxii and xxiii variable dayes, the xxiiii and xxv a hayle-ſtorme threatned, the xxvi xxvii

and xxbiii parching hote.

Laſt quarter the xxix day, xxi minutes paſt foure in the afternoone, and the xxx and xxxi ſtormy in the night.

Good dayes.	Euill dayes.
2. A ſound Card.	1. 4. Be not too forward.
6. 7. Iſ plyed in time.	3. 5. Nothing but frownes.
11. 12. Firſt come, firſt ſerv'd.	8. 9. Gainſt wind and tide.
15. Better late then neuer.	10. But a dead man. (mour.
16. Frends in court & country	13. 14. Iſ ſorts not his hu-
19. 20. Aduantage offered.	17. 18. Iſ will not proſper.
26. 27. Better then it ſeemes.	21. 24. A heauy aduerſary.
30. As friendly as may be.	22. 23. 28. 31. Spare coſt.
	25. Betwixt two extremes.
	29 Iſ bootes not to bragge.

Auguſt.

☿ is Weſt Southweſt, at Sunriſe, ♃ and ♂ are both euening Starres, ☉ and ♀ attend vpon Sol.

THe i and ii dayes ſomewhat ſtormy, the iii & iiii pleaſant dayes.

New Moone the v day, at two a clocke, 47. minutes in the morning, and the vi viii and ix ſomething turbulent, the x and xii exceeding hote.

Firſt quarter the xii day, at vii a clocke, & xx minutes in the euening, and the xiii xiiii & xv inclined to thunder, the xvi xvii and xviii daſhing ſhowers.

Full Moone, the xx day. ☽ minutes before v. a clocke in the morning, and the xxi xxii xxiii and xxiv, lofty winds, with hayle or thunder, the 25. 26 and 27 temperate weather.

Laſt quarter the 28 day, at nine a clocke, 26 minutes in the forenoone, and the 29 ſome ſudden guſts, the 30 and 31 pleaſant dayes.

Good dayes.	Euill dayes.
3. 4. Take it, and weare it.	1. But hardly hazarded.
8. Better that then nothing.	2. 7. 9. Meſſe the Cuſhion.
10. 11. Be forward & feare not	5. 6. Faſt in the Byers.
12. 13. Wy playne plodding.	14 Beware the worſt.
15. 16. Ouercome with kindneſs	17. 18. 19 Looke for no good.
25. Preſſe for preferment.	20. 21 But hath entertayne-
26. 27. No contradiction.	22. 23. 24 Loſt labour. (ment.
30. 31. The amends is making	28. 29 Cold comfort.

September.
